

Project: GenAI - Containerized video transcription and chat app

Introduction

- This project involves creating a chatbot that can answer questions from a video. It showcases a blend of technologies including Docker, OpenAI, Whisper, Embeddings, Chat completions, Pinecone, and Retrieval-Augmented Generation.

Prerequisites

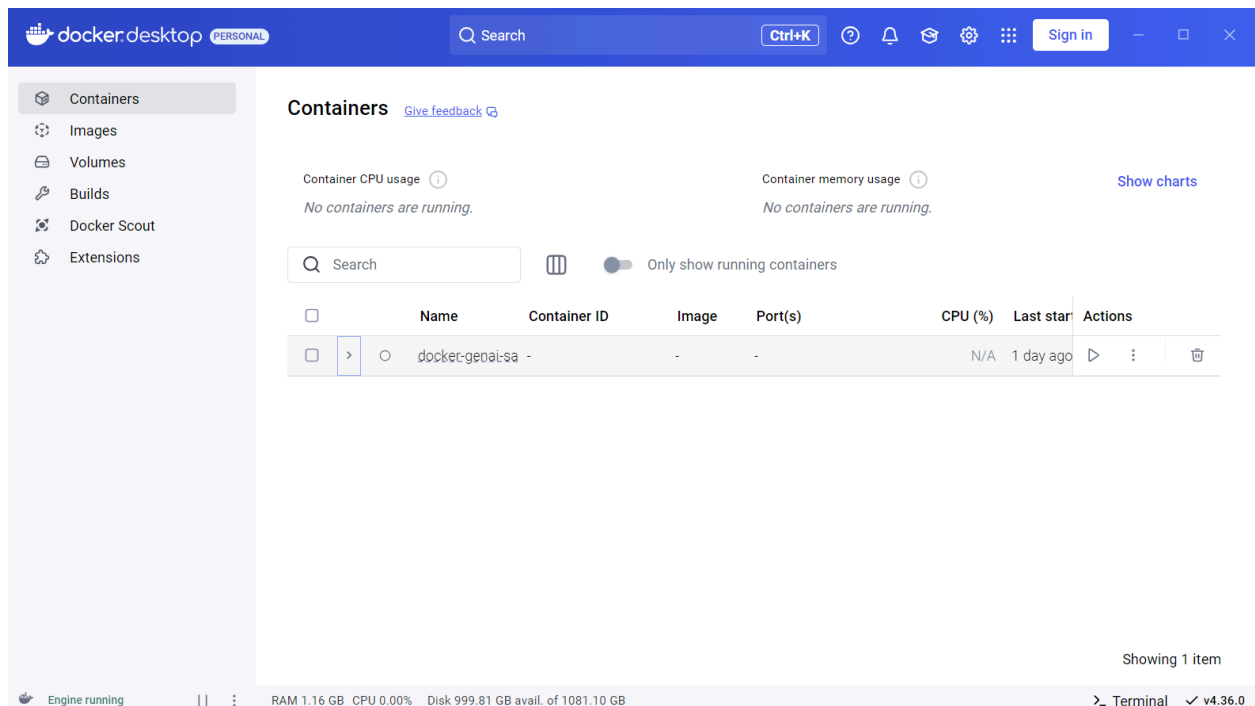

- OpenAI API Key [<https://platform.openai.com/api-keys>]
- Pinecone API Key
[<https://app.pinecone.io/organizations/-NuXXZWkLDvM83Ow2Jo/projects/80dc8048-05b6-40a0-8972-eb9b6e5e7e3b/indexes>]
- Latest version of Docker Desktop
- Git client

Application Purpose

- The chatbot is designed to transcribe video content and answer questions related to the video, providing relevant timestamps from the source.

Step 1: GenAI - Containerize your app.

1. First, install the latest version of Docker Desktop for windows.

Project: GenAI - Containerized video transcription and chat app

2. Create a working directory and navigate inside it(optional).

```
C:\Users\patel>mkdir video_transcription_chat_app  
C:\Users\patel>cd video_transcription_chat_app  
C:\Users\patel\video_transcription_chat_app>
```

3. Clone the repository from GitHub to your machine by using a command-line based git client:

- git clone https://github.com/Davidnet/docker-genai.git

```
C:\Users\patel\video_transcription_chat_app>git clone https://github.com/Davidnet/docker-genai.git  
Cloning into 'docker-genai'...  
remote: Enumerating objects: 66, done.  
remote: Counting objects: 100% (66/66), done.  
remote: Compressing objects: 100% (43/43), done.  
remote: Total 66 (delta 24), reused 60 (delta 20), pack-reused 0 (from 0)  
Receiving objects: 100% (66/66), 114.38 KiB | 1.14 MiB/s, done.  
Resolving deltas: 100% (24/24), done.  
C:\Users\patel\video_transcription_chat_app>
```

4. Navigate to the directory of the cloned repository.

- cd docker-genai

```
C:\Users\patel\video_transcription_chat_app>cd docker-genai  
C:\Users\patel\video_transcription_chat_app\docker-genai>
```

- You should now have the following files inside the directory.

Project: GenAI - Containerized video transcription and chat app

```
C:\Users\patel\video_transcription_chat_app\docker-genai>dir
Volume in drive C is OS
Volume Serial Number is 8AA4-9ED7

Directory of C:\Users\patel\video_transcription_chat_app\docker-genai

11/29/2024  01:06 PM    <DIR>          .
11/29/2024  01:06 PM    <DIR>          ..
11/29/2024  01:06 PM                494 .env.example
11/29/2024  01:06 PM            3,668 .gitignore
11/29/2024  01:06 PM    <DIR>          docker-bot
11/29/2024  01:06 PM            298 docker-compose.yml
11/29/2024  01:06 PM           1,091 LICENSE
11/29/2024  01:06 PM            103 README.md
11/29/2024  01:06 PM    <DIR>          yt-whisper
                5 File(s)            5,654 bytes
                4 Dir(s)  837,838,516,224 bytes free

C:\Users\patel\video_transcription_chat_app\docker-genai>
```

5. Next, in the docker-genai directory, create a text file called .env and specify your API keys.

```
C:\Users\patel\video_transcription_chat_app\docker-genai>notepad .env.txt
C:\Users\patel\video_transcription_chat_app\docker-genai>
```

```

11/29/2024  01:06 PM            3,668  .gitignore
11/29/2024  01:06 PM    <DIR>          docker-bot
11/29/2024  01:06 PM                298  docker-compose.yml
11/29/2024  01:06 PM            1,091  LICENSE
11/29/2024  01:06 PM                103  README.md
11/29/2024  01:06 PM    <DIR>          yt-whisper
                7 File(s)                7,980 bytes
                4 Dir(s)  837,600,632,832 bytes free

C:\Users\patel\video_transcription_chat_app\docker-genai>
```

6. Build and Run the application. For Docker to do this, run the following command in a terminal inside the docker-genai directory:
 - `docker compose up - --build`

```
C:\Users\patel\video_transcription_chat_app\docker-genai>docker compose up --build
[+] Building 6.6s (9/16)                                docker:desktop-linux

```

Project: GenAI - Containerized video transcription and chat app

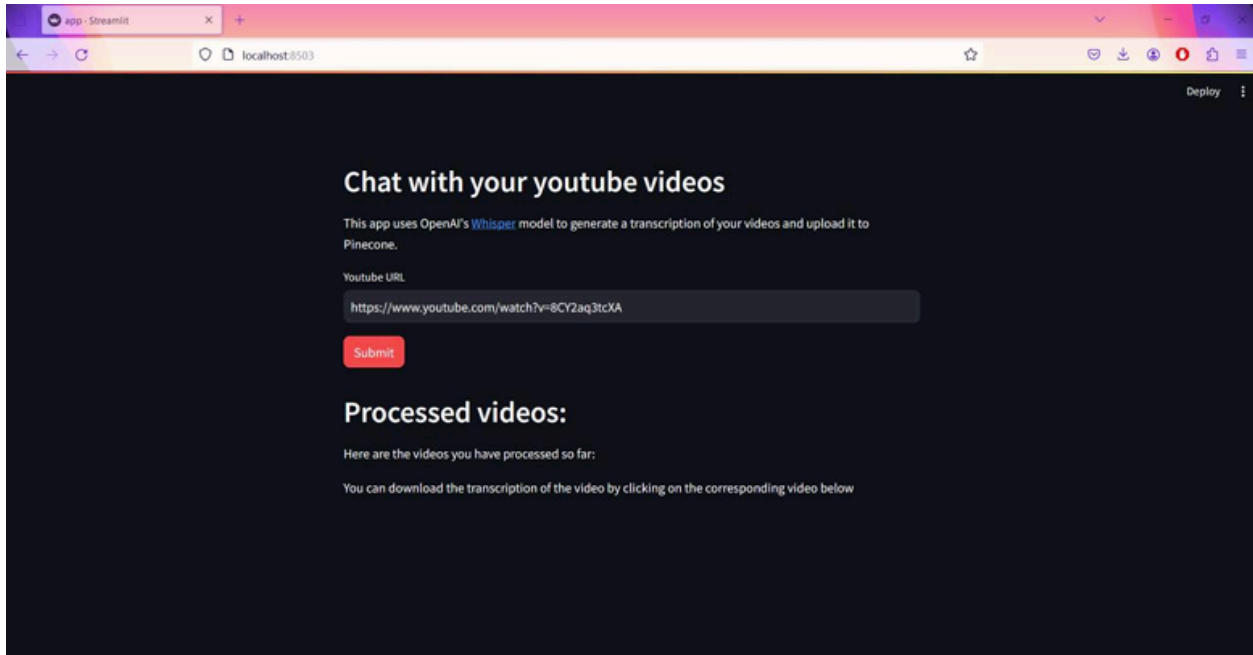

- In the above logs, we can see the services are exposed on ports **8503** and **8504**. The two services are complementary to each other.
- The yt-whisper service is running on port 8503. This service feeds the Pinecone database with videos that you want to archive.

Step 2: Video transcription and chat

Using the yt-whisper Service

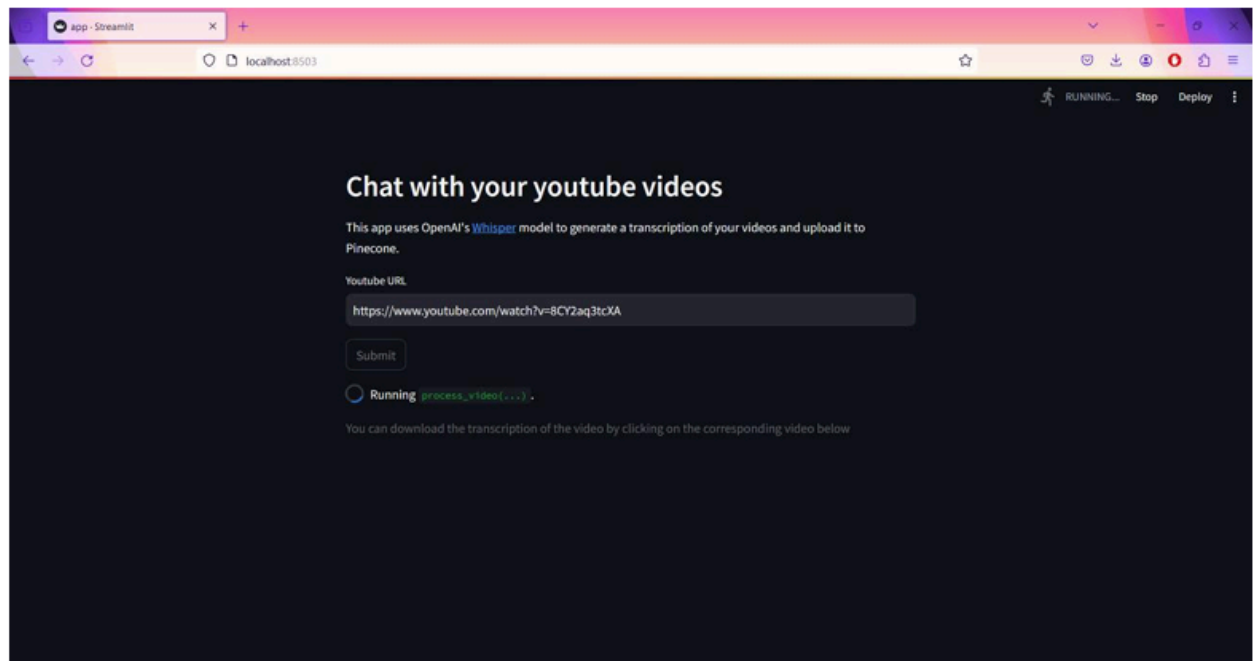

7. Open a browser and access the yt-whisper service at:
 - `http://localhost:8503`

Project: GenAI - Containerized video transcription and chat app

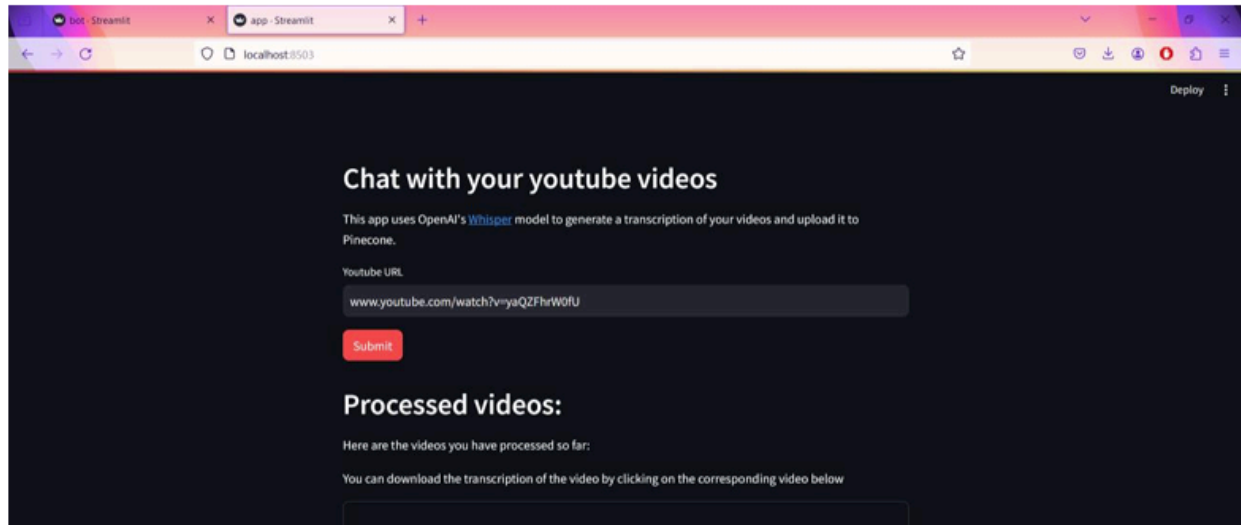

8. Once the application appears, in the Youtube URL field specify a Youtube video URL and select Submit. Let's try these links.

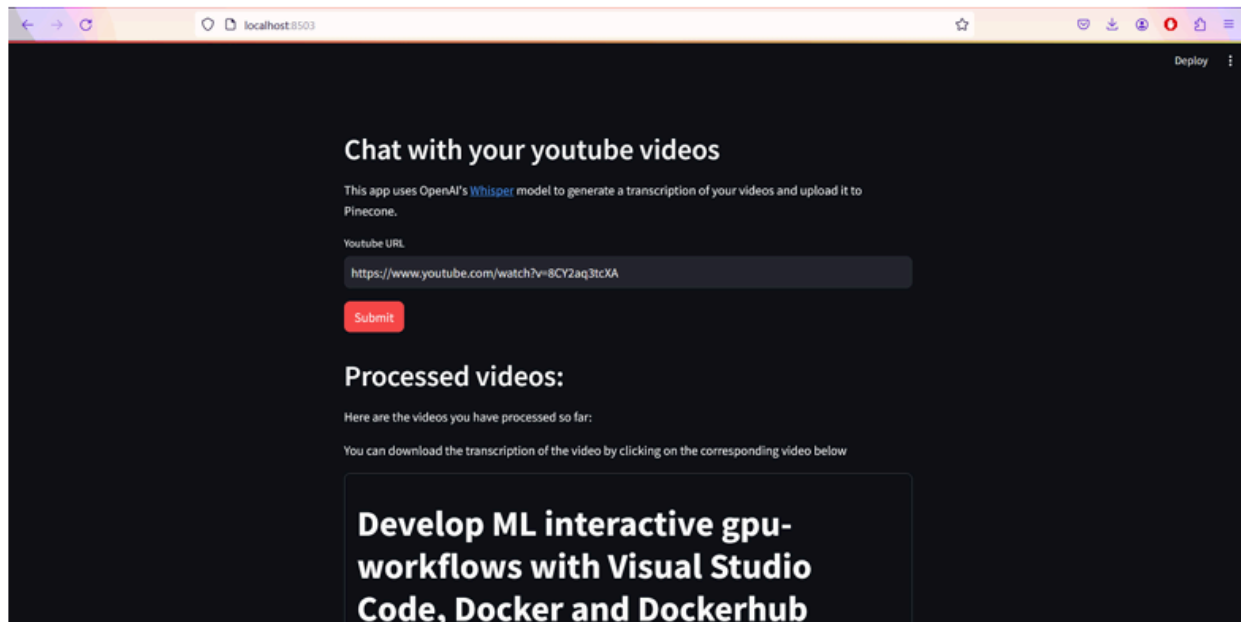

- <https://www.youtube.com/watch?v=8CY2aq3tcXA>
- www.youtube.com/watch?v=yaQZFhrW0fU

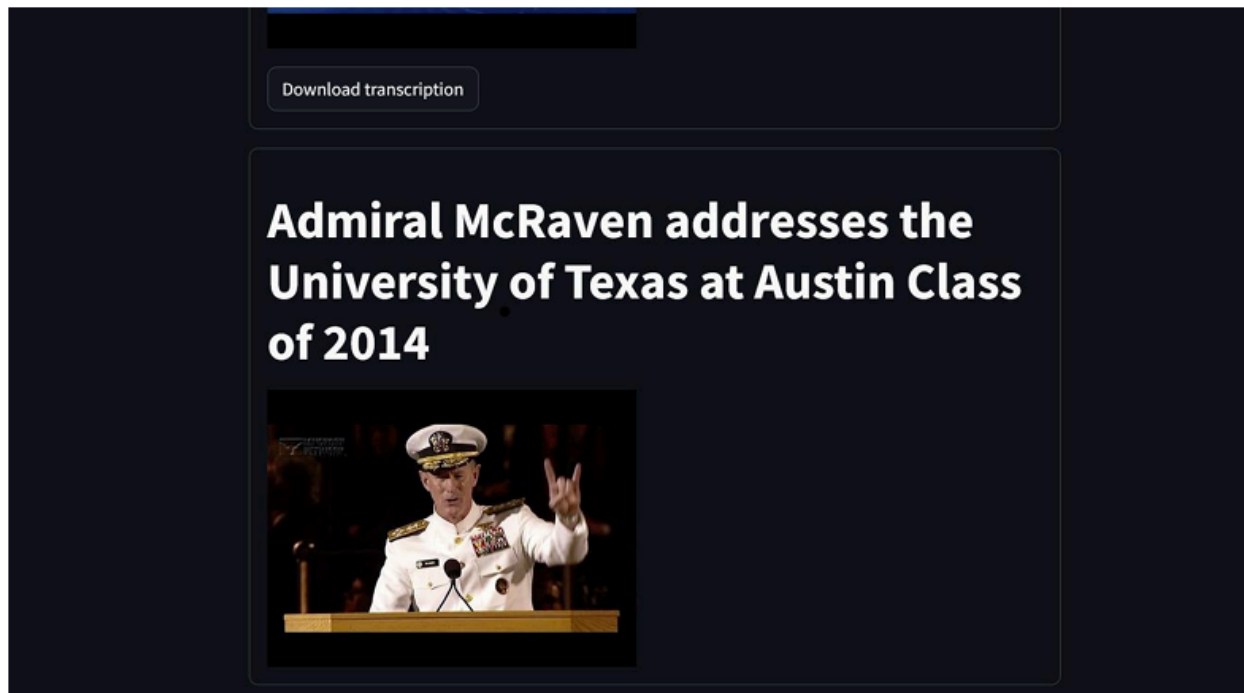

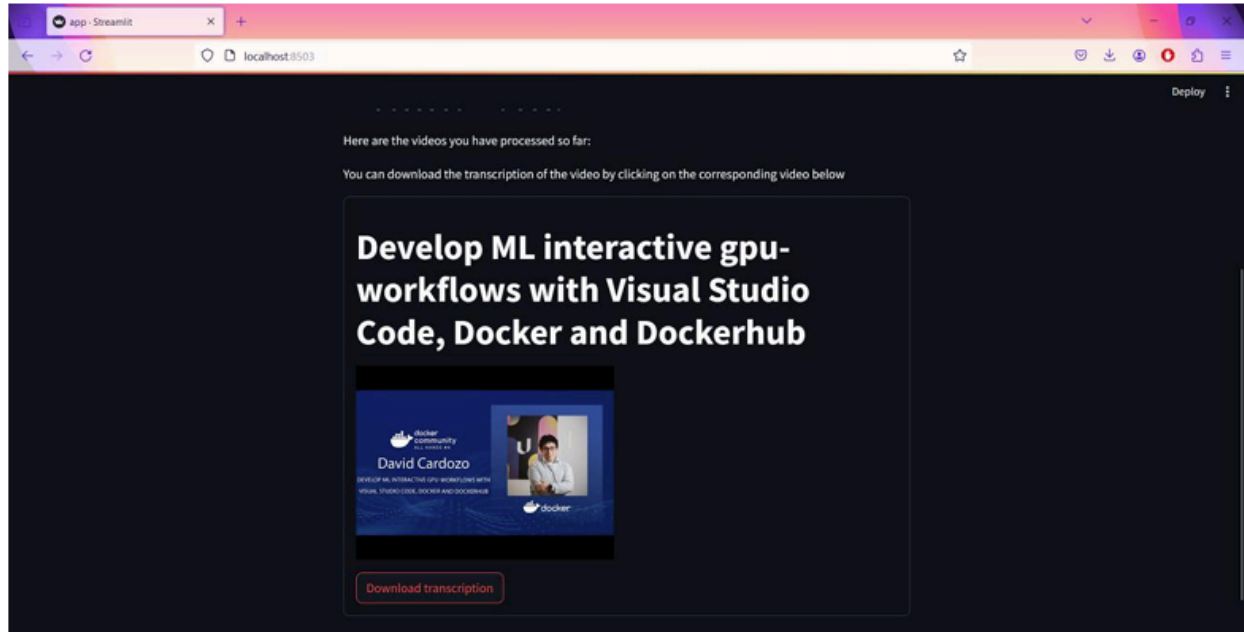

Project: GenAI - Containerized video transcription and chat app

9. The yt-whisper service downloads the audio of the video, uses Whisper to transcribe it into a WebVTT (*.vtt) format then uses the text-embedding-3-small model to create embeddings, and finally uploads those embeddings into the Pinecone database.
10. After processing the video, a video list will appear in the web app showing the videos that have been indexed in Pinecone. You can click the button to download the transcript.

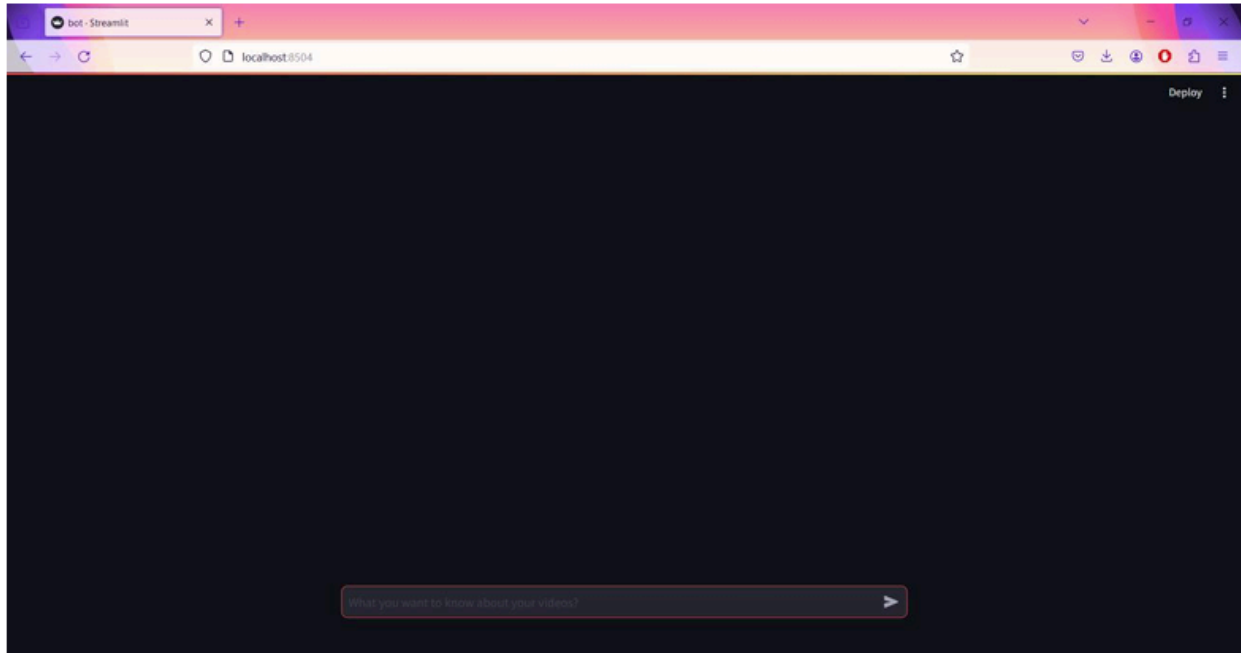

Project: GenAI - Containerized video transcription and chat app

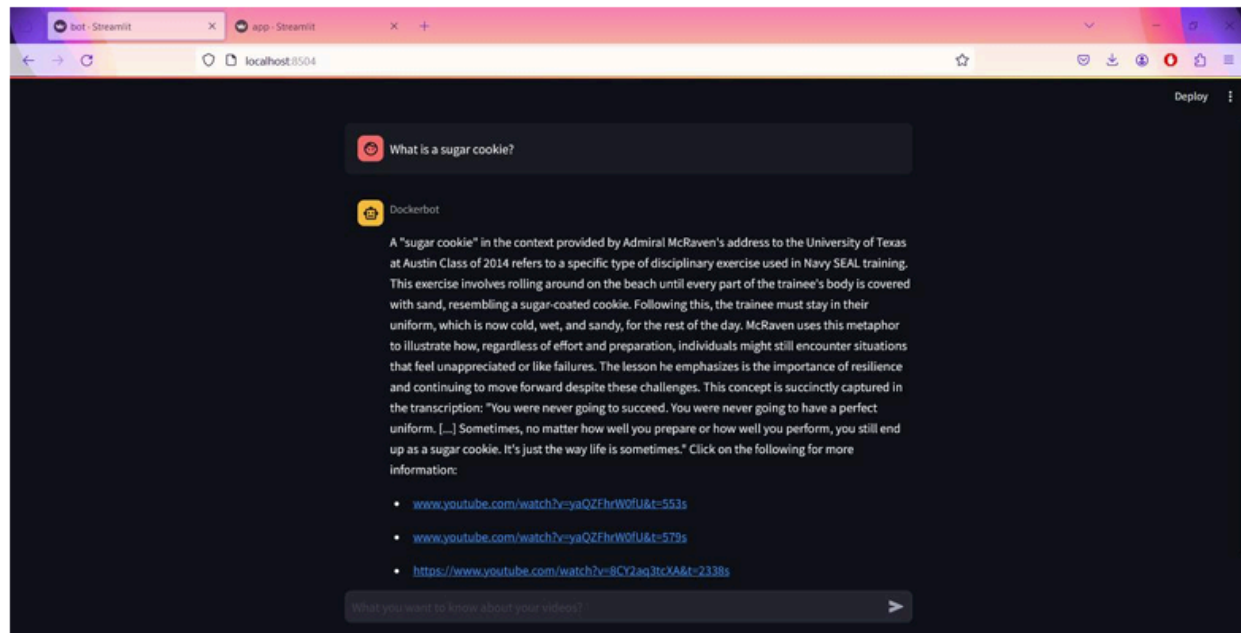

Using the dockerbot Service

11. Now we can access the dockerbot service on port 8504 and ask questions about the videos that were processed by the yt- whisper service. Open a browser and access the service at
 - <http://localhost:8504>

Project: GenAI - Containerized video transcription and chat app

12. What do you want to know about your videos? text box, ask the Dockerbot a question "What is a sugar cookie?". The answer to that question should be displayed as it exists in one of the videos processed in the previous example,
<https://www.youtube.com/watch?v=yaQZFhrW0fU>

Project: GenAI - Containerized video transcription and chat app

13. Docker Compose is a tool for defining and running multi-container applications. Here with a single command, it enables to easily run this application and simplifies the control of your entire application stack, making it easy to manage all things in a single, comprehensible YAML configuration file.

```
Command Prompt - docker c x + v
